WHY EARTHTRACK

We put the customer at the centre of what we do. The requirements and practicalities of a mine site vs a heavy engineering workshop vs helping an electrician find the best cost-saving solution for a job, is what we are about.

Our clients expect from us:

- Products that are future-ready so they can build on lighting systems as they need it with solar options, sensors, 'smart' controls, emergency battery backup, accessories and more.
- Experience and understanding of site conditions and circumstances which allows us to identify solutions in a proactive way and provide advice you can trust.
- Highly developed technical knowledge combined with research and development conducted in-house to constantly evaluate and select the best products in each category.
- If we don't have an off-the-shelf product to meet a customer requirement, we have the knowledge to source options worldwide or designed in-house that will deliver.
- Products that comply with Australian electrical, fabrication, powder coating standards.
- Value-for-money pricing across our whole range at the highest quality to suit the application.
- Maximum energy efficiency with lumen output and driver technology that are best suited for the power output of the luminaire.
- Environmentally friendly products and systems, providing maximum power with the use of renewable energy such as Solar and hybrid innovation and non-toxic materials (mercury and lead free).
- Industry-leading warranties on every product and a fast turnaround in product repairs and replacements.
