

HARLSAN AIR CORE BITS

Get a significant productivity edge with bit flow paths that maximise air and sample transfers. Whether it's coring through hard bands without resorting to hammer or lifting the metres you drill every day, Harlsan air core bits keeps you drilling.

The dynamo of the air core industry. These extraordinarily robust bits feature extra heavy-duty tungsten carbide blades giving you the ability to withstand the penetration shocks of high speed air core drilling. The blade design balances cutting power with an open bit face that performs powerfully in a broad range of drilling conditions.

KEY FEATURES AND BENEFITS

- Excellent sample return
- Tungstens survive tough drilling conditions
- Modifications to suit your needs
- Wide stock range for immediate supply
- Proven design with 20 years in the field

TECHNICAL SPECIFICATIONS

AUSTRALIAN MADE TOUGHNESS 

Air Core and Vacuum Bits in 3 and 4 Blade types	Sizes	75mm, 78mm, 3", 3½", 4" and 4½"
	Thread Types	Remet, Metzke, TS and a wide range of other threads
